## Quick Guide: WooCommerce Integration with JustLanded for WordPress

*If you need any assistance, please contact [support@shapingrain.com](mailto:support@shapingrain.com). We do provide free support for this free plug-in, but as per our support policy, we do not provide support through the comments section on themeforest.*

The WooCommerce integration plug-in provides basic integration of WooCommerce and JustLanded by allowing a user to associate the call to action buttons with a product to trigger a buy action, and by fixing some styling issues between the JustLanded theme and WooCommerce to ensure the responsiveness of WooCommerce's default styling.

This Quick Guide will walk you through its basic features. Most of the interface is self-explanatory, but if you do need any assistance, this guide should provide some answers. And if it does not, please contact customer support.

### 1. Setting up the integration plug-in

You can install the WooCommerce integration plug-in from its installable zip file found in the 'Plug-Ins' folder of the original file you downloaded from themeforest, just like any other WordPress plug-in. After its activation it hooks into the JustLanded options panel to provide an additional tab with settings.

Please note that the plug-in assumes that WooCommerce 2 has already been installed and that at least one product is active.

You can verify whether the plug-in is working by launching the JustLanded options panel by clicking on the paper plane icon. If the plug-in is active, you should see an additional "WooCommerce" tab right under the "Payment Options" tab.

If you cannot see that tab, please verify that you are using at least version 1.1.2 of JustLanded for WordPress.

And finally, please note that all settings you make only affect the currently active profile for maximum flexibility.

## 2. Action Buttons

### Action Buttons Integration

Allow for action buttons to add products to the cart.

#### First Button: Select a product

JustLanded for WordPress

Select a product for this button. If none is selected, the button's default URL will be used.

#### Second Button: Select a product

---- Please select an option ----

Select a product for this button. If none is selected, the button's default URL will be used.

The JustLanded theme has a split-button call to action feature that is prominently displayed as part of the banner. You can associate each of the buttons with one product. Clicking on the button will then trigger an 'add to cart' action. This setting will overwrite the URL set under 'Action Buttons'.

## 3. Pricing Tables

### Pricing Table Integration

Assign products to pricing table buttons

#### Package 1: 'Standard'

JustLanded for WordPress

Select a product for this package's action button.

#### Package 2: 'Basic'

---- Please select an option ----

Select a product for this package's action button.

#### Package 3: 'Premium'

---- Please select an option ----

Select a product for this package's action button.

#### Package 4: 'Enterprise'

JustLanded for WordPress

Select a product for this package's action button.

You can also associate the call to action button of a pricing table with a WooCommerce product. Make sure you create your pricing table first, then reload the admin panel in WordPress. You will then be able to see a representation of your pricing table with select boxes to choose a product for each package.

## 4. Redirection Target

### Redirection Target Redirect customers after add-to-cart action.

---

#### Select A Page

---

Custom URL

Select an existing page as redirection target URL.

#### Custom URL

---

`http://localhost/justlandedwp/product/test-product/`

Enter a custom redirection target URL.

This is the only global option that applies to all profiles. You can select a page or enter a custom URL to redirect to after each click on a call to action button. You may choose to redirect customers to the cart, to the checkout page, or to a URL of your choice.
